PROBLEM STATEMENT

Time and resource drain

The learning curve for these tools steals precious time from core research, and there is a significant knowledge gap.

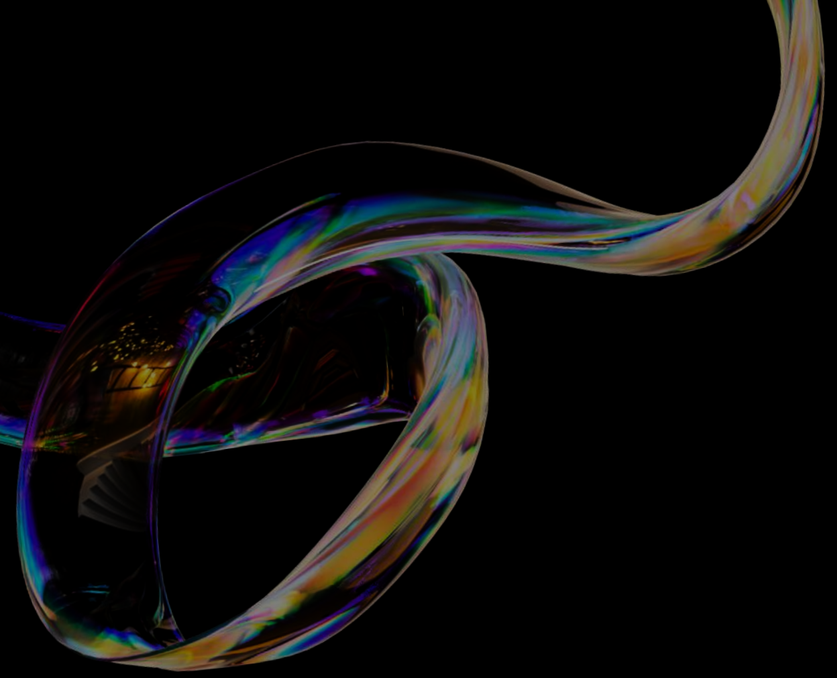

PROBLEM STATEMENT

Time and resource drain

The learning curve for these tools steals precious time from core research, and there is a significant knowledge gap.

Accessibility to high throughput screening

High-throughput screening methods for biomolecules are out of reach for most researchers, especially in resource-limited settings.

PROBLEM STATEMENT

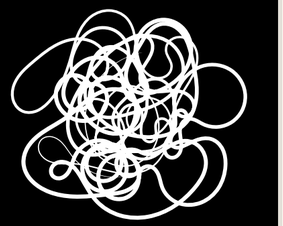

Time and resource drain

The learning curve for these tools steals precious time from core research, and there is a significant knowledge gap.

Accessibility to high throughput screening

High-throughput screening methods for biomolecules are out of reach for most researchers, especially in resource-limited settings.

Complexity of protein design

Computational tools for de novo protein design are difficult to use and not easy to maintain. Problems arise in the conceptual development of research projects.

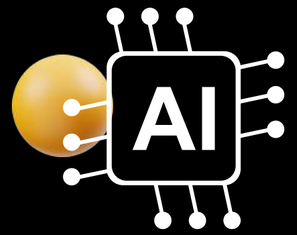

INTRODUCING DENOVOBIO

an AI-powered solution that accelerates biomolecular design

Before Denovobio	With Denovobio
Approach **Rational design and directed evolution**	Approach **Algorithmic design and wet lab validation**
Resources **Wet lab testing of 15,000+ variants**	Resources **Wet lab testing of 10 variants**
Performance **~20% active variants**	Performance **90% active variants**
Results **Enhanced properties in ~1 in 8,000**	Results **Enhanced properties in 1 in 5**

*hypothetical numbers

DENOVOBIO PLATFORM

Our computational pipeline can design or improve new biomolecules, combined with high throughput wet lab validation.

Our platform is modular, scalable, and accessible to academic researchers and industry experts. We also provide tailored consulting.

Modular pipeline for computational de novo biomolecular design. Versatile and scaleable on the cloud, we cater to your use case.

TECHNOLOGY & UNIQUE SELLING PROPOSITION

Modular pipeline for computational de novo biomolecular design. Versatile and scaleable on the cloud, we cater to your use case.

Design-Test-Validate Cycle -
Protein language models trained and improved on challenging datasets.

TECHNOLOGY & UNIQUE SELLING PROPOSITION

TECHNOLOGY & UNIQUE SELLING PROPOSITION

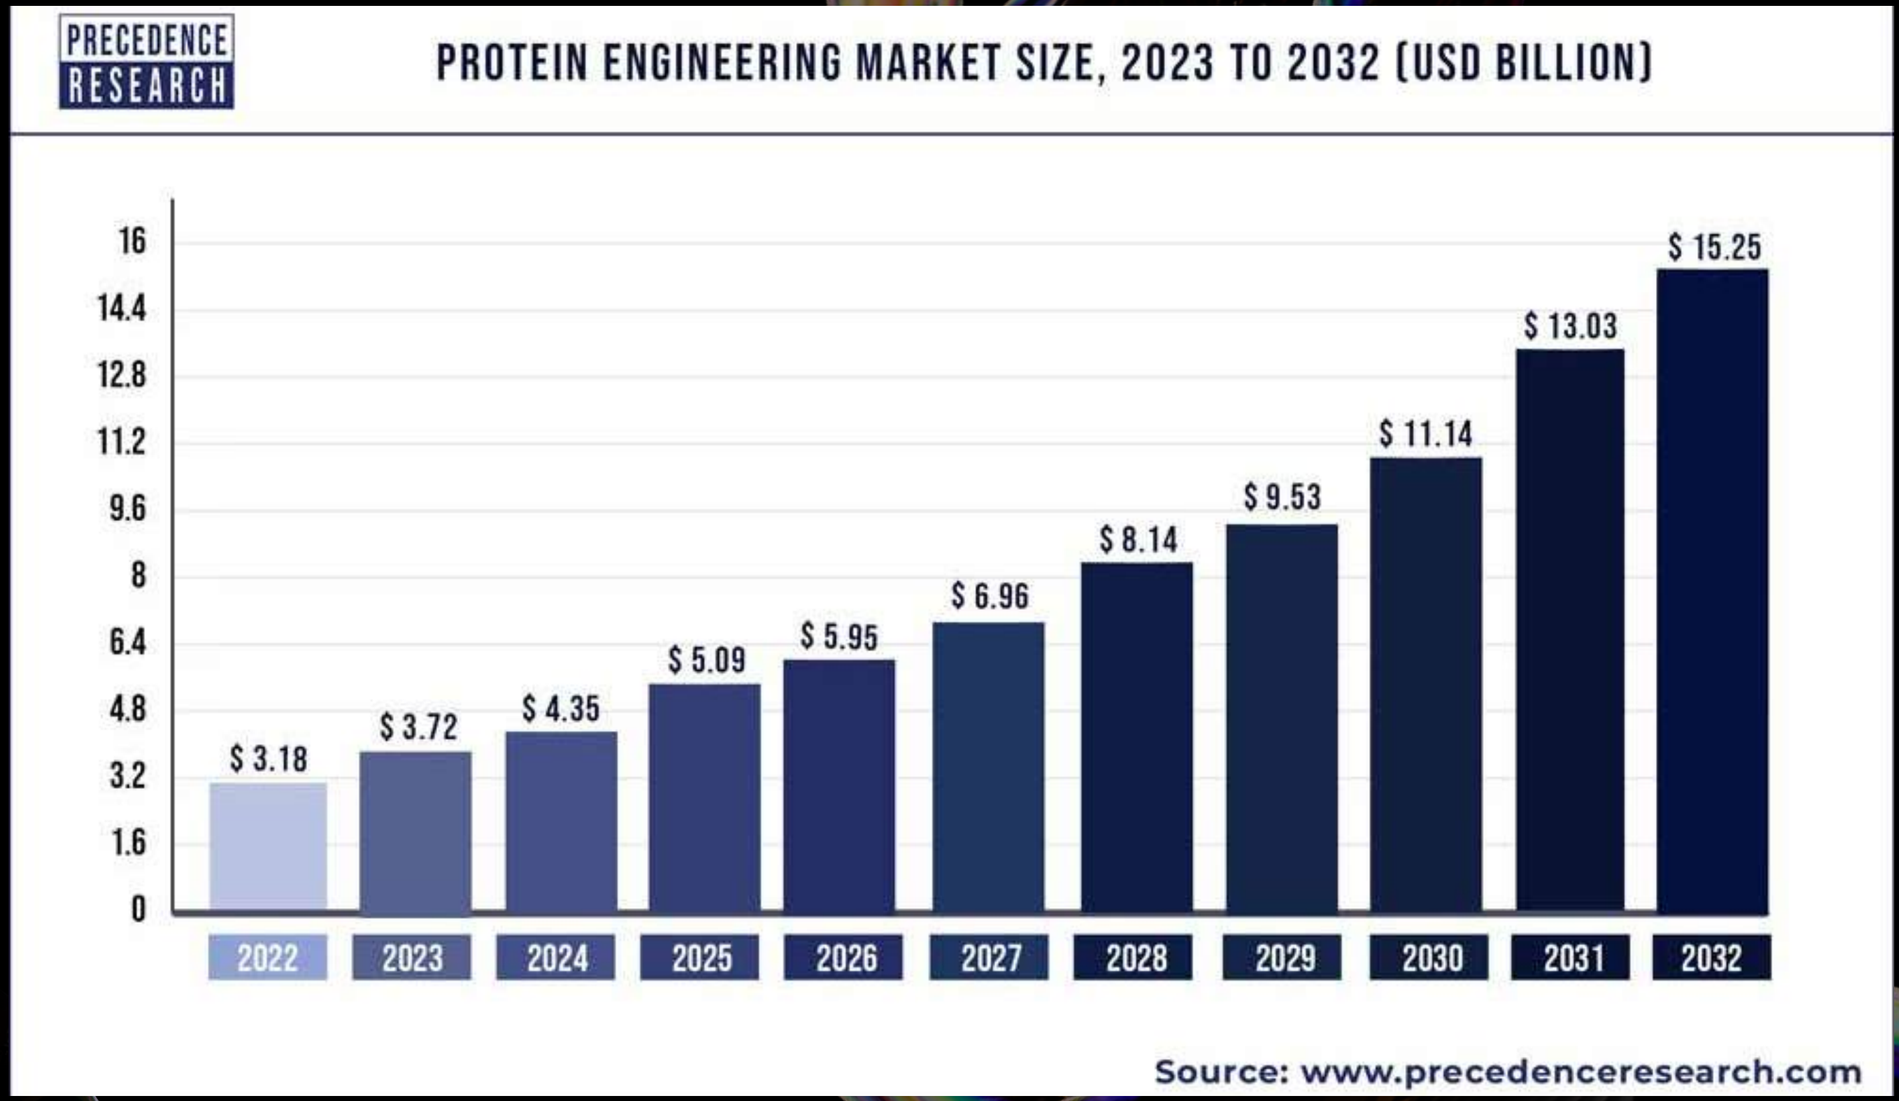

Modular pipeline for computational de novo biomolecular design. Versatile and scaleable on the cloud, we cater to your use case.

Design-Test-Validate Cycle - Protein language models trained and improved on challenging datasets.

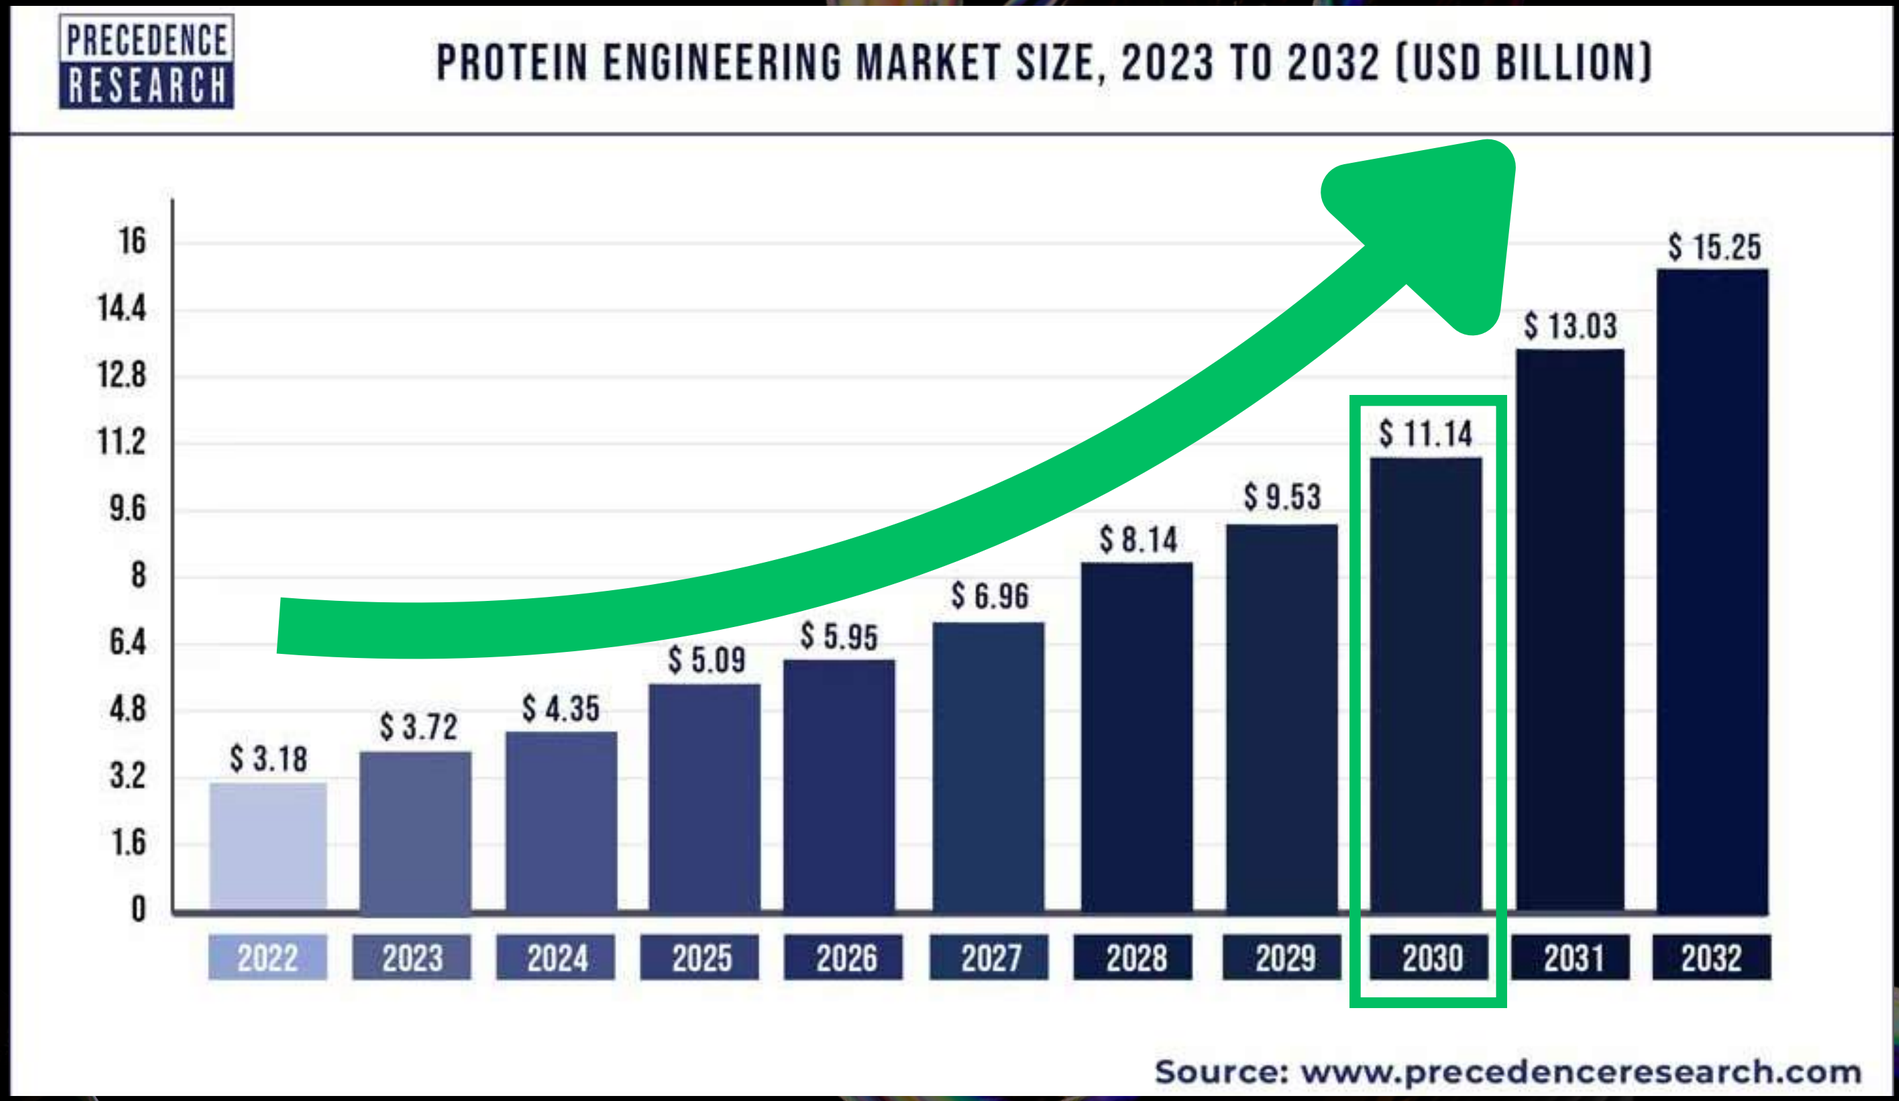

High throughput wet lab validation for your biomolecules of interest with quick turnaround time.

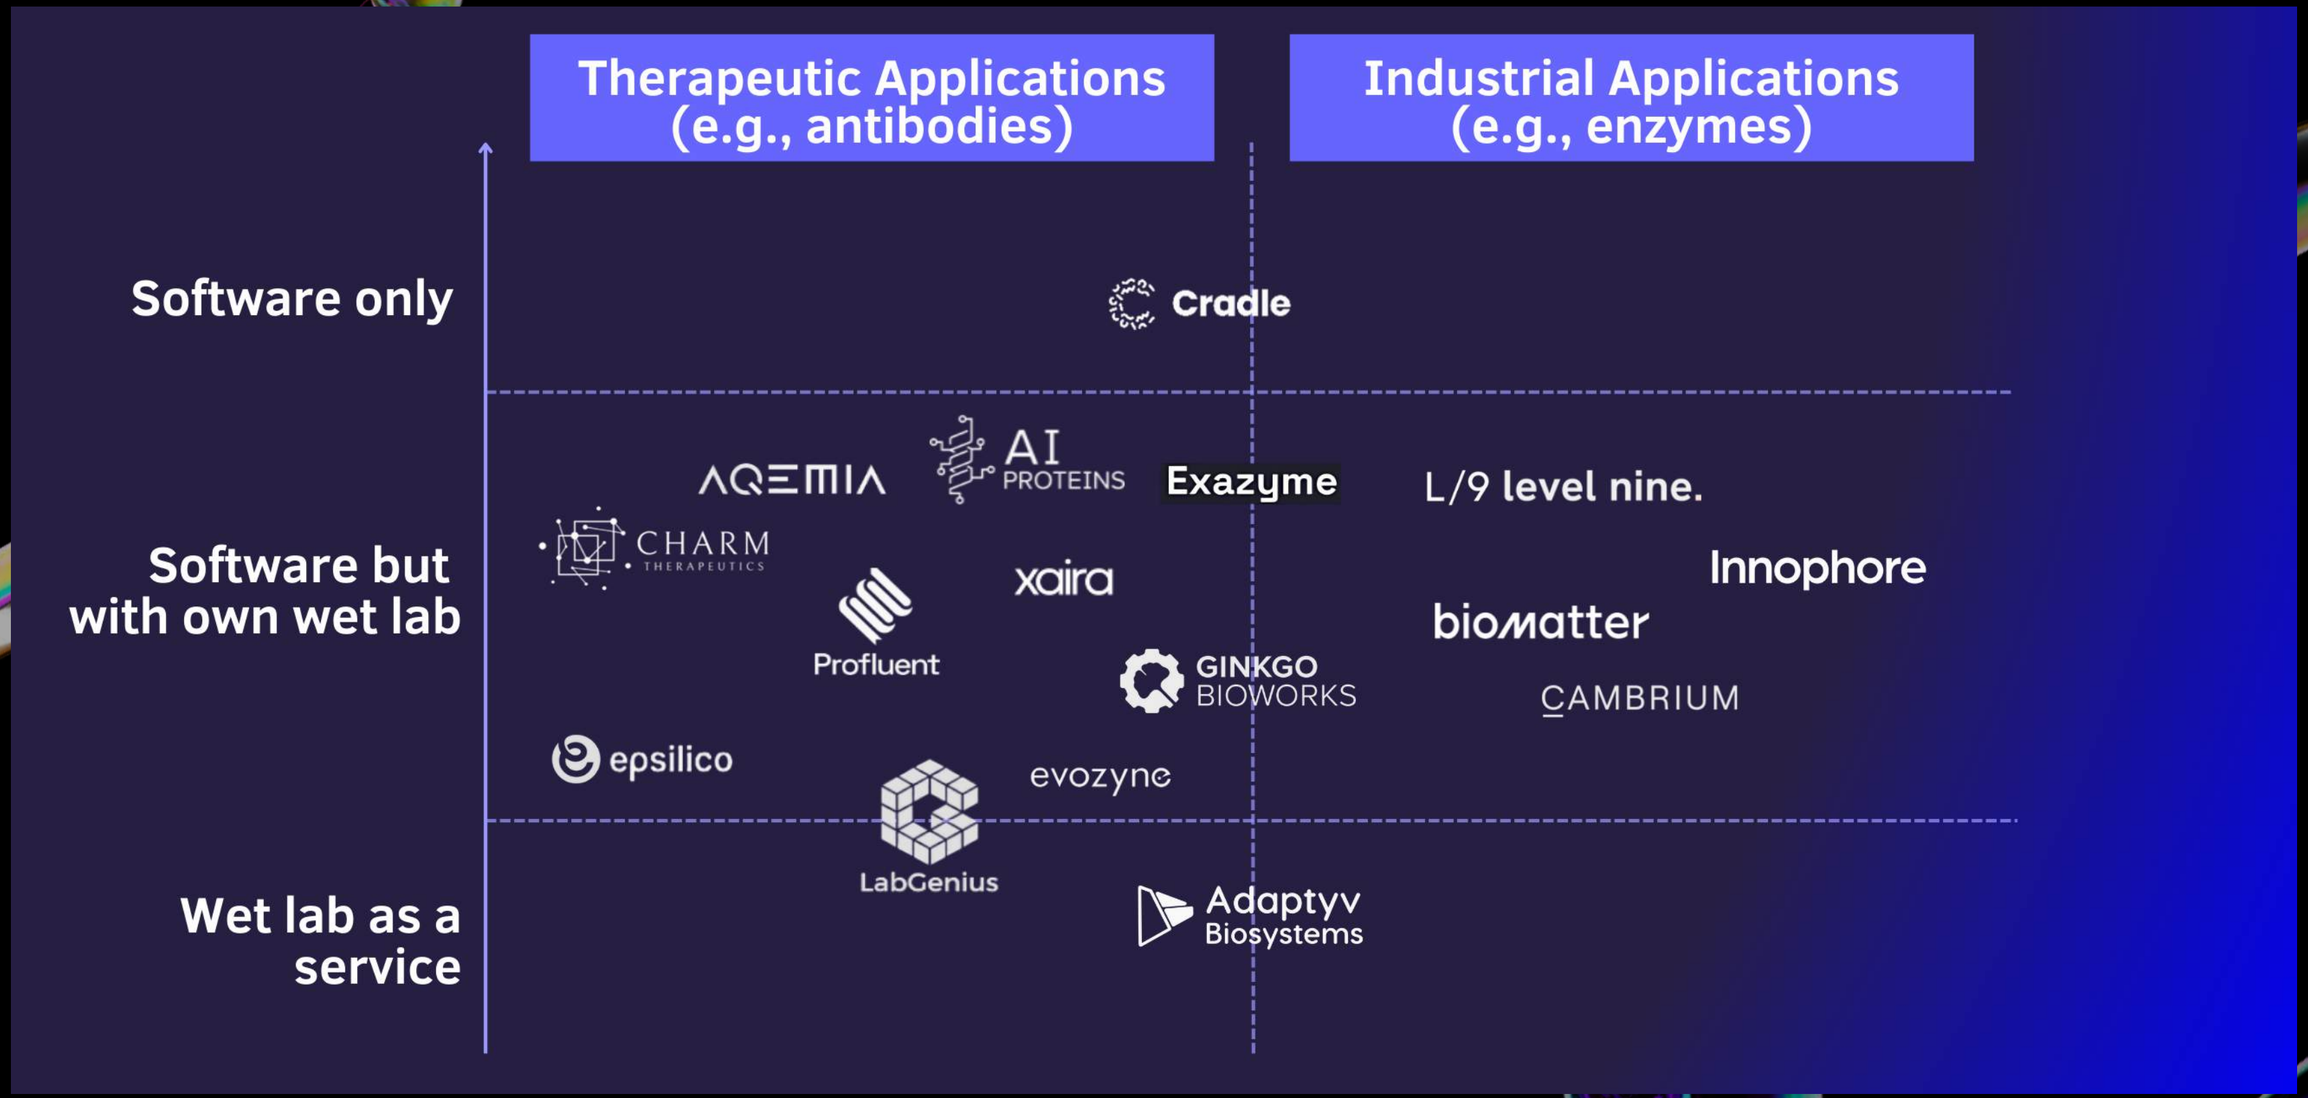

MARKET ANALYSIS

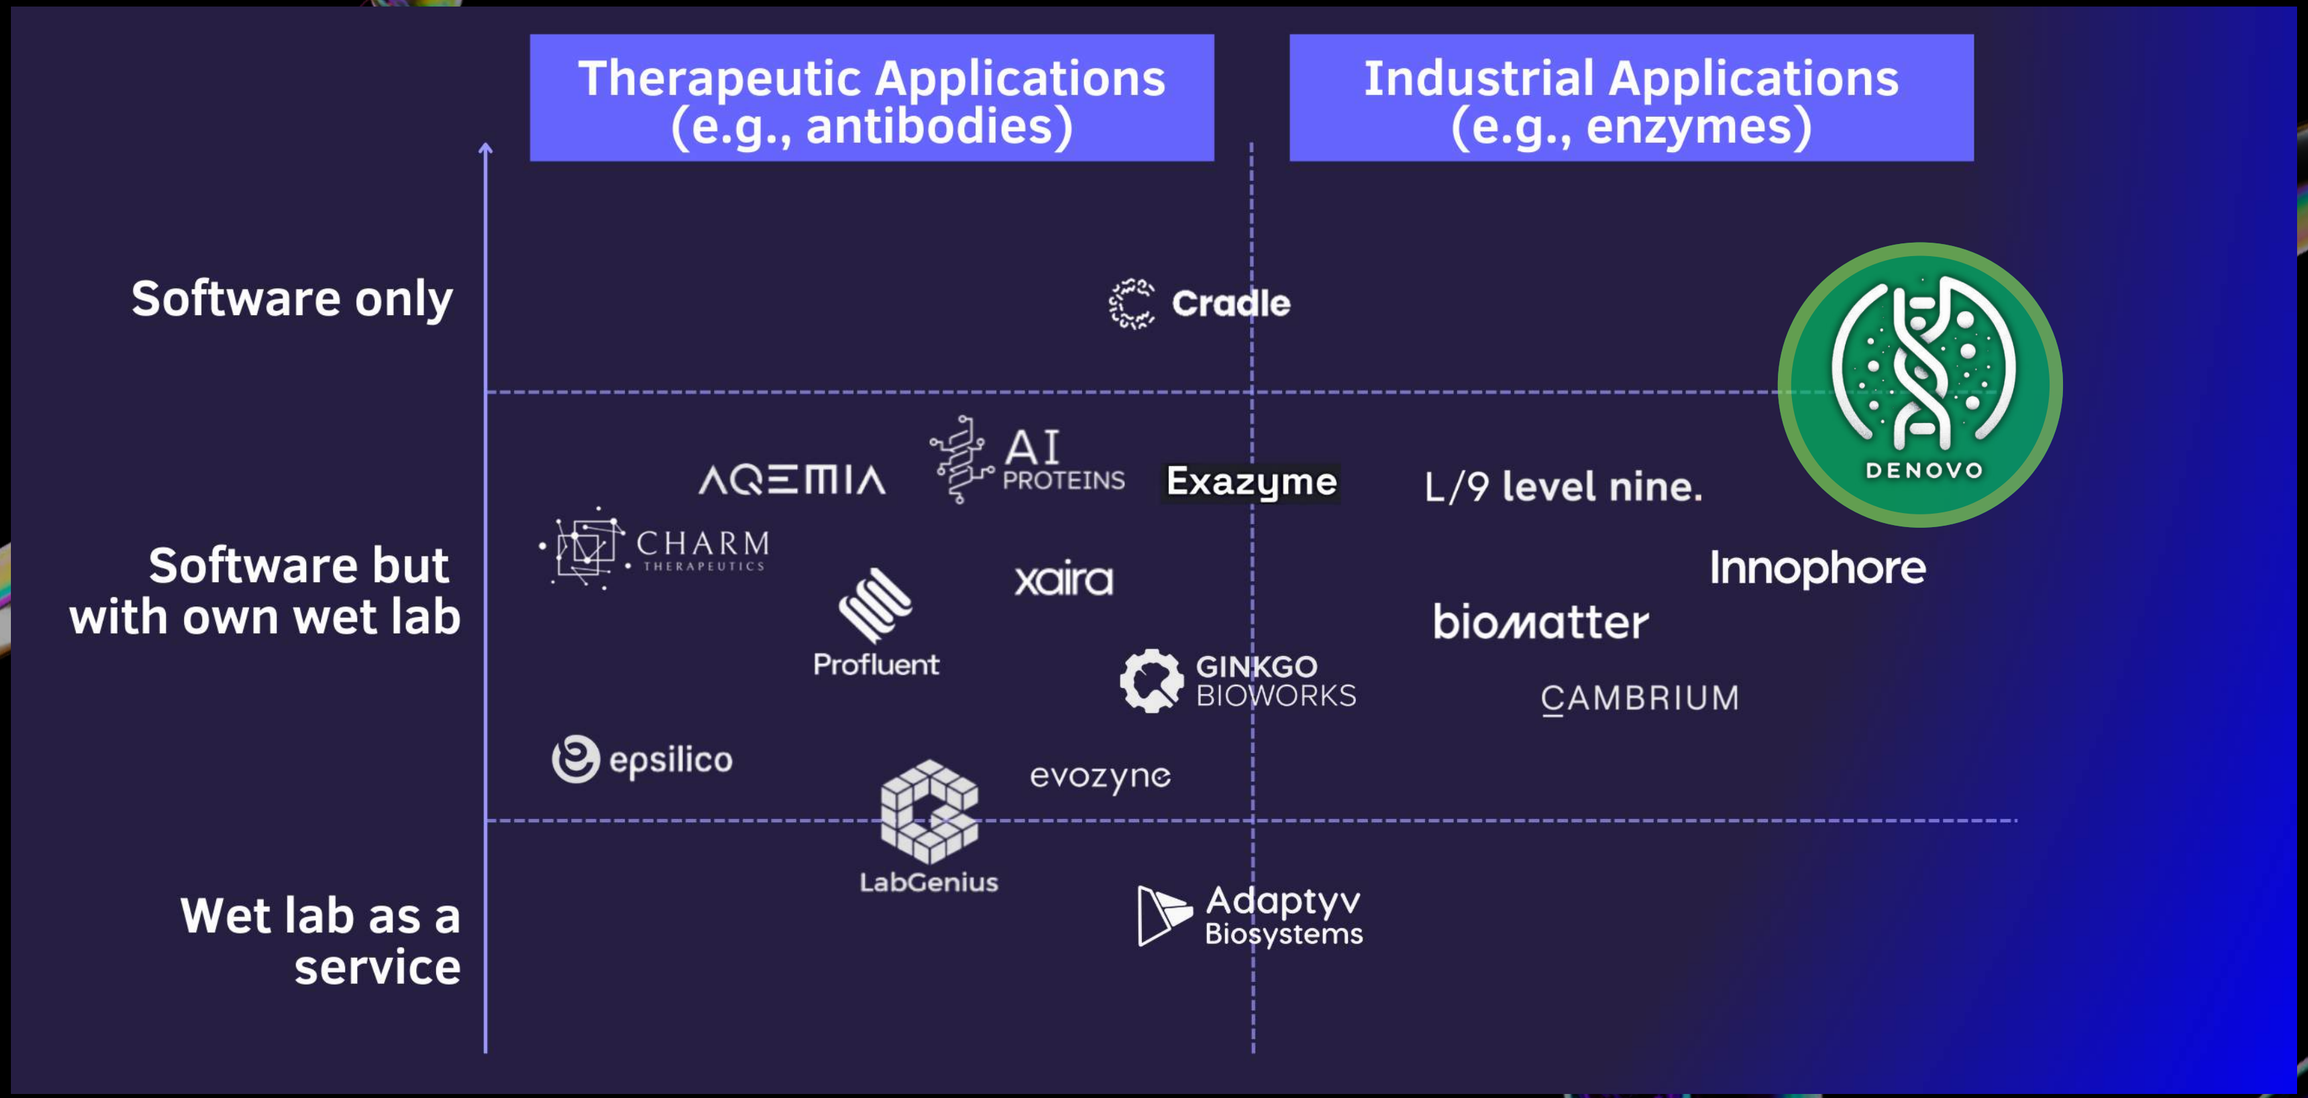

MARKET ANALYSIS

COMPETITION

COMPETITION

BUSINESS MODEL

Academic researchers:

Pay-as-you-go model for tailored protein designs.
Consulting and training agreements.
Differential pricing based on the use case.

BUSINESS MODEL

Academic researchers:

Pay-as-you-go model for tailored protein designs.
Consulting and training agreements.
Differential pricing based on the use case.

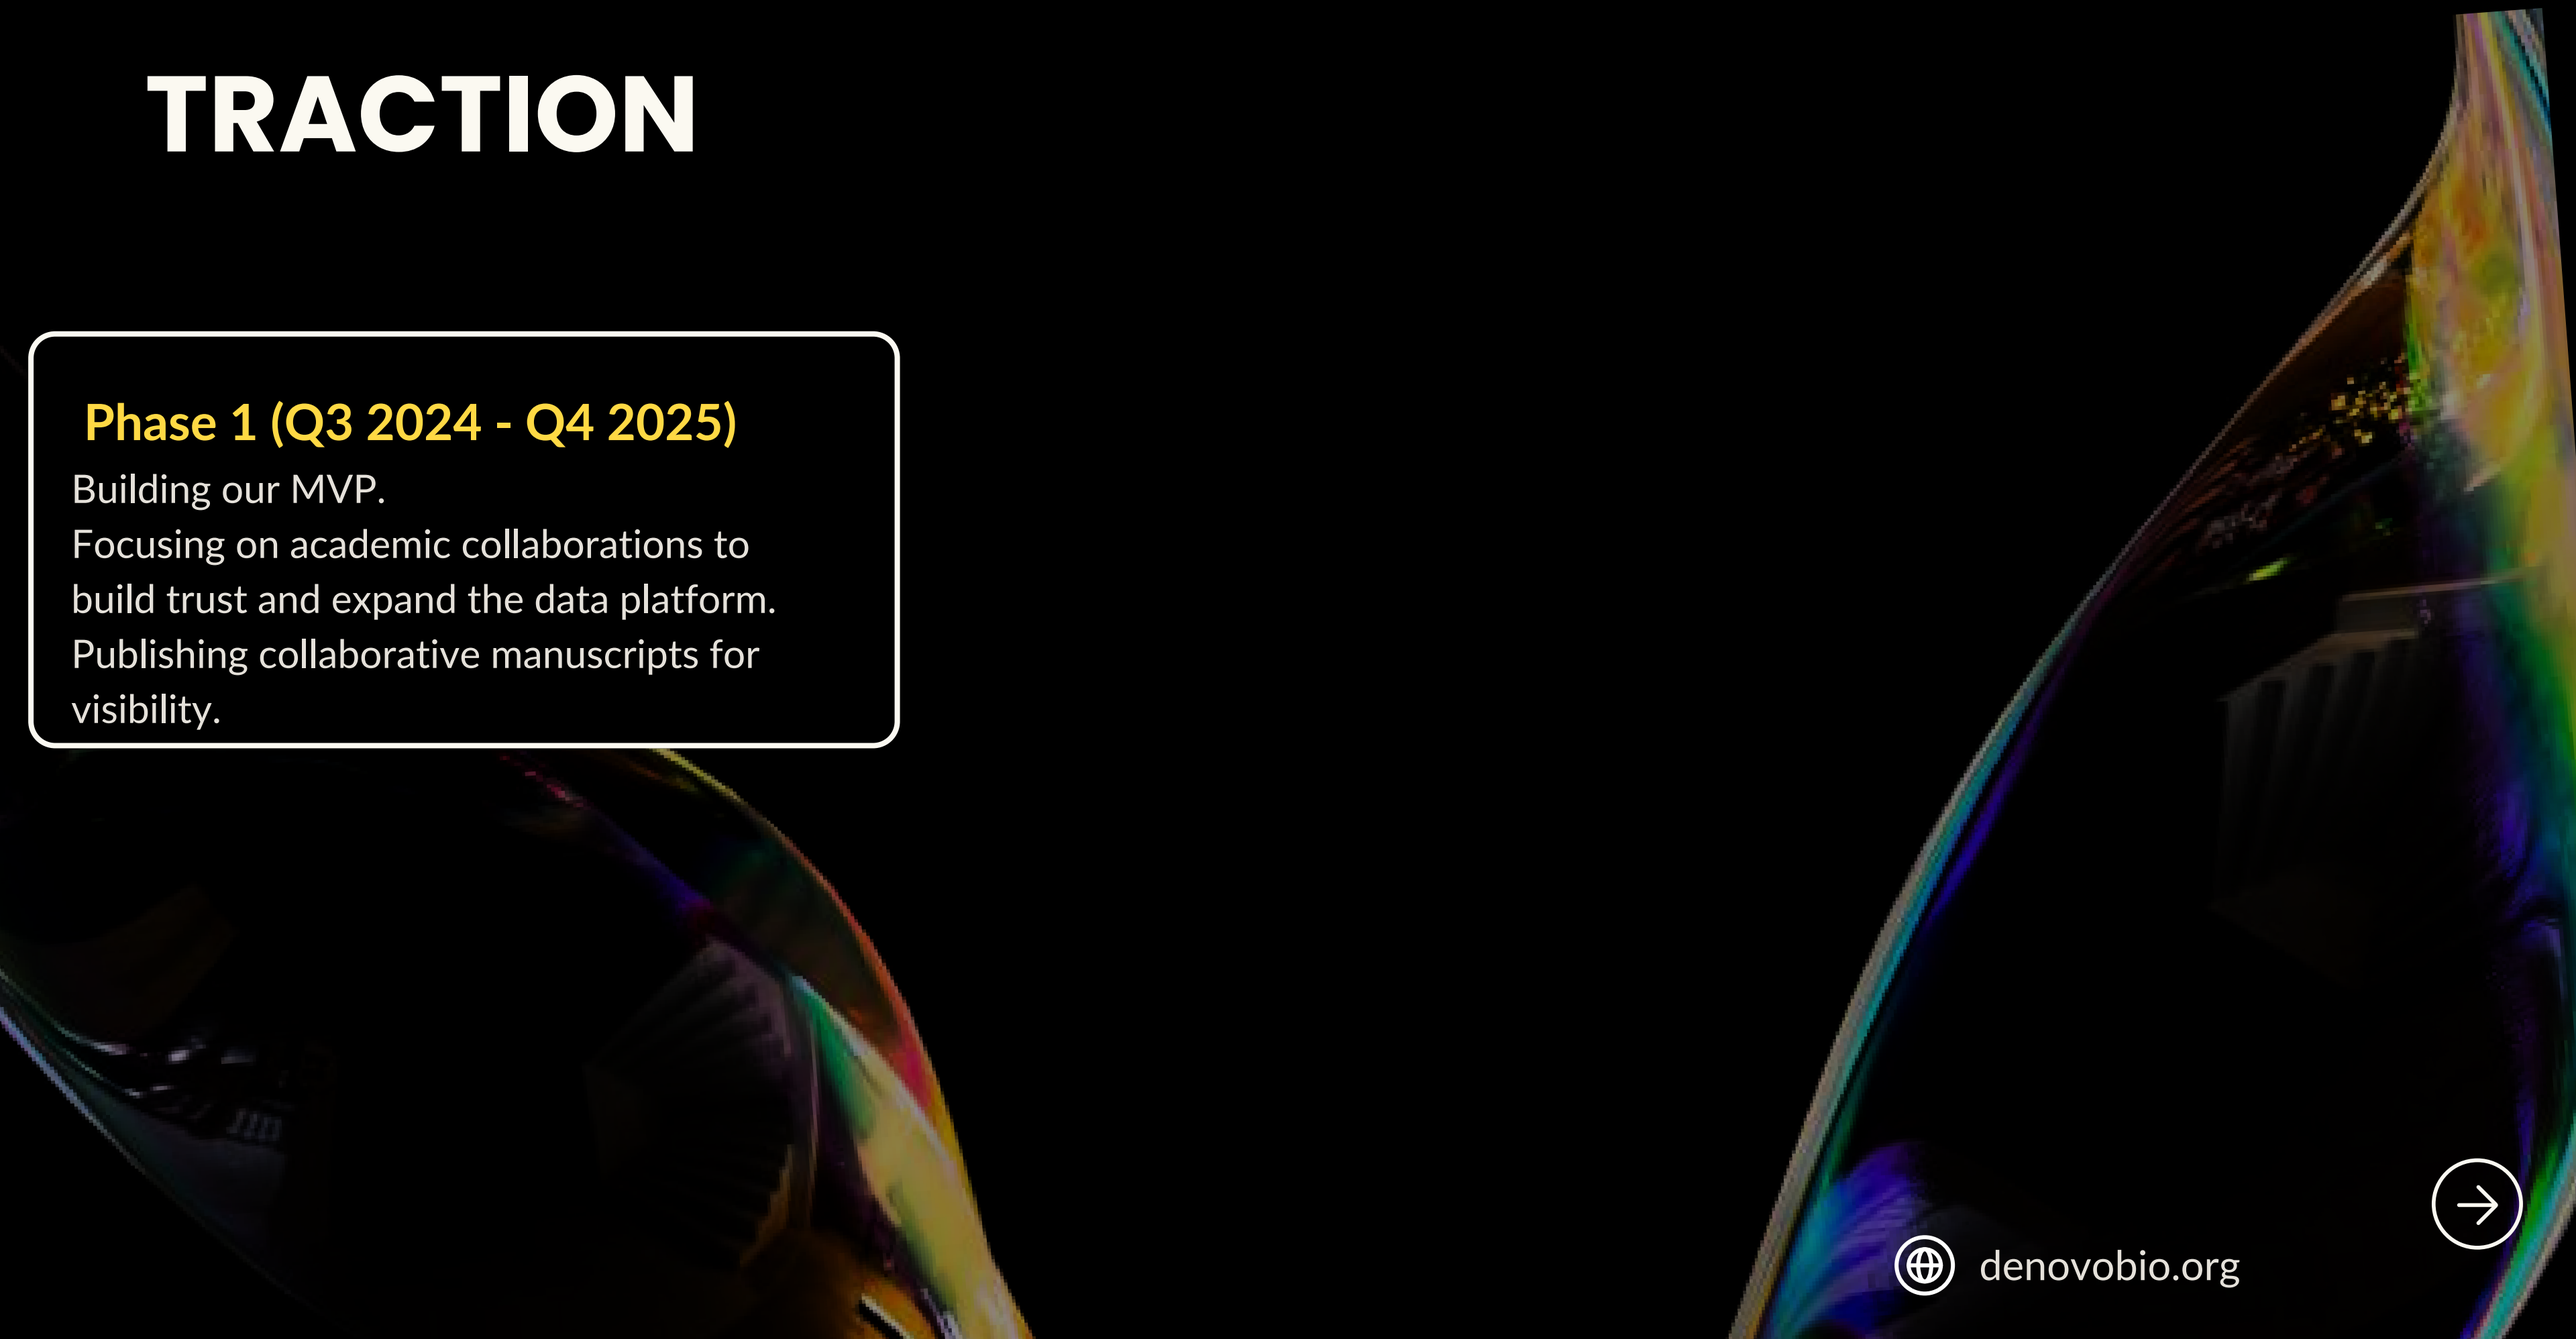

Big Pharma:

Milestone-based contracts, lowering risk with performance-driven payments.
Setting up internal pipelines.
After-sales support.

TRACTION

Phase 1 (Q3 2024 - Q4 2025)

Building our MVP.
Focusing on academic collaborations to build trust and expand the data platform.
Publishing collaborative manuscripts for visibility.

TRACTION

Phase 1 (Q3 2024 - Q4 2025)

Building our MVP.
Focusing on academic collaborations to build trust and expand the data platform.
Publishing collaborative manuscripts for visibility.

Modular pipeline for multiple use cases

Phase 2 (Q1 2026 - Q3 2027)

Industry outreach through conferences, and hackathons. Improving the design data bank by signing NDAs with industries.
Strengthening the wet lab validation turnaround.

Modular pipeline for multiple use cases

Phase 2 (Q1 2026 - Q3 2027)

Industry outreach through conferences, and hackathons. Improving the design data bank by signing NDAs with industries.
Strengthening the wet lab validation turnaround.

Faster high throughput turnaround time

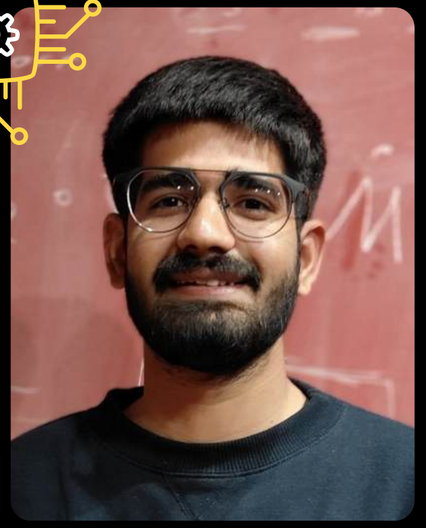

Phase 3 (Q1 2028)

Scale up to larger biotechnologies. Explore co-creation opportunities. Better training for academia and specialized consulting services for clinical pipelines.

Multifold improvement in design targets

MEET THE DENOVERS

Bringing computational biologists, and protein engineers together

SIDDHANT SHARMA

Computational Lead
Institute of Science & Technology, Austria

MARVIN ALBERS

RNA Biochemist
Vrije Universiteit, Netherlands

MAHMUDUL HASAN

Protein Engineering
Institute of New Materials, Germany

MOHAMED TAHA SOUDANI

Sales and Marketing
Technical University Darmstadt, Germany

WHAT WE ASK

We request your valuable mentorship to help shape and move this venture forward.

The power of denovo biomolecular design should be accessed and utilized by all

denovobio.org

denovo.bio

Resource Requirements:

Starting as a university spinoff.
Applying for research grants.
Hiring university students for lab validation and pipeline testing.
Creating an advisory board and getting consultants on per hour.

CHALLENGES & SOLUTIONS

CHALLENGES & SOLUTIONS

Resource Requirements:

Starting as a university spinoff.
Applying for research grants.
Hiring university students for lab validation and pipeline testing.
Creating an advisory board and getting consultants on per hour.

High throughput delivery:

Partnering with excellent CROs with fast turnaround time to customers.
